

## **Service Team Advice Eric Wolff**

### **6.4L Diesel Engine Maintenance and Fuel Guidelines**

- ULSD is required and will be identified by EPA stickers on the fuel pumps.
- After longer pulls you need to let vehicle sit and idle (5 minutes) so that the Turbo's have time to cool down.
- B5 is the highest tolerable Bio Diesel blend
- CJ-4 is required for the 6.4L motor, anything else will create too much soot in the particulate filter, which could prematurely clog, and is non-warrantable through Ford Motor Co.
- Motorcraft additives will add lubricity to fuel, keep fuel from gelling in cold weather, and add performance and fuel mileage.
- The fuel and water separator needs to be drained on a monthly basis.
- Oil change interval is 5,000 miles. Fuel filter change 10,000 miles.
